

# Pages to Word and back Again

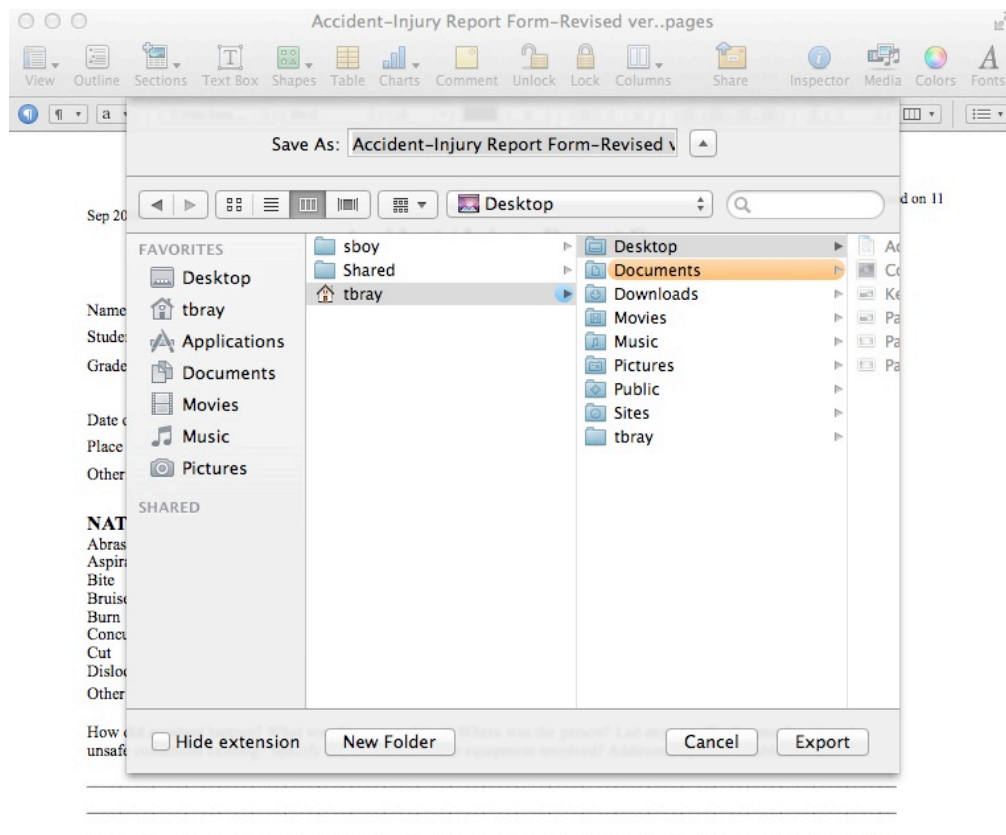

When you want to open a Word doc in Pages, do a secondary click (right-hand click) and choose Open With and then scroll down the list to Pages. The document will open in Pages and it will also make Pages the default program from opening this document in the future. It is possible that you will see a dialogue box communicating some errors in the process. The errors usually have to do with fonts or tables that did transfer exactly. Now it is in Pages and ready to edit.

But, what if the document is in Pages and you want it in Word? Go to the File menu and choose Export.

A box will open with several options. Click on Word and then Next.

The next dialogue box will prompt you for the location to export the Word doc. Now your Pages doc is in Word.
